                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         *NOTE: This record contains 81 individual

* sequencing reads that have not been assembled into

* contigs. Runs of N are used to separate the reads

* and the order in which they appear is completely

* arbitrary. Low pass sequence sampling is useful for

* identifying clones that may be gene-rich and allows

* overlap relationships among clones to be deduced.

* However, it should not be assumed that this clone

* will be sequenced to completion. In the event that

* the record is updated, the accession number will

* be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Grand-Pierre, N., Grant, G., Hagos, B., Heaford, A., Horton, L., Howland, J.C., IlievI., Johnson, R., Jones, C., Kann, L., Karatas, A., Klein, J., Landerës, T., Largocque, K., Lehoczky, J., Levine, R., Lieu, C., Liu, G., Locke, K., Macdonald, P., Marquis, N., McCarthy, M., McEwan, P., McGwart, A., McKernan, K., McPheeters, R., Meldrim, J., Meneus, L., Mihova, T., Miranda, C., Mlenga, V., Morrow, J., Naylor, J., Norman, C.H., O'Connor, T., O'Donnell, P., O'Neil, D., Olivar, T.M., Pierre, N., Pisani, C., Pollara, V., Raymond, C., Riley, R., Rogov, P., Rothman, D., Roy, A., Santos, R., Schauer, S., Severy, P., Spencer, B., Stange-Thomann, N., Stojanovic, N., Subramanian, A., Palamas, J., Tesfaye, S., Thoodore, J., Tirrell, A., Travers, M., Trigilio, J., Vassiliev, H., Viel, R., Vo, A., Wilson, B., Walk, M., Wyman, D., Ye, W.J., Young, G., Zainoun, J., Zimmer, A. and Mody. Direct Submission
Genoscope, 2, rue Gaston Cremieux, 91057 Evry Cedex, FRANCE
The full annotated consensus sequence of the complete Tetraodo
nigroviridis rRNA gene cluster is available at
http://www.genoscope.cns.fr/ (URL provided by the submitter)
sequence corresponds to position 2151-2937 of the consensus.

Homo sapiens chromosome 11, clone RP11-126H19
                                                                                                                                                                                                                                                                                                                NOTE: This record contains 80 individual sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that the record is updated, the accession number will be preserved.

The sequence data in this record represents an 'enhanced' version of a Phase 2 submission. Specifically, the indicat order and orientation of each sequence contig has been established using one or more of the following: read-pair data from individual subclones, overlaps with neighboring clones, alignment with available reference sequence (e.g.,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              HTG; HTGS PHASE2; HTGS Canis familiaris (dog) Canis familiaris

human), and/or confirmation by PCR testing. In addition, the sequence assembly is based on at least 8% average coverage in Q20 bases and has been reviewed to rule out gross misassemblies, the low-quality ends of sequence contigs have been trimmed away, and each base is associated with a phrap-derived quality score.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         NOTE: This is a 'working draft' sequence. It currently
consists of 7 contigs. Gaps between the contigs
are represented as runs of N. The order of the pieces
is believed to be correct as given, however the sizes
of the gaps between them are based on estimates that have
provided by the submittor.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            *NOTE: This record contains 85 individual

* sequencing reads that have not been assembled into

* contigs. Runs of N are used to separate the reads

* and the order in which they appear is completely

* arbitrary. Low-pass sequence sampling is useful for

* identifying clones that may be gene-rich and allows

* overlap relationships among clones to be deduced.

* However, it should not be assumed that this clone

* will be sequenced to completion. In the event that

* the record is updated, the accession number will

* be preserved.

Quality coverage: 3.27 in Q20 bases; agarose-fp estimation Quality coverage: 3.12 in Q20 bases; sum-of-contigs estimation.

* NOTE: This is a "working draft' sequence. It currently consists of 61 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

1 NOTE: This is a 'working draft' sequence. It currently consists of 2 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces are represented as runs of N. The order of the sizes of the gaps between them are based on estimates that have provided by the submittor.

1 This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

29796 2985: gap of unknown length

29796 75080: contig of 45185 bp in length.

length

NOTE: This record contains 77 individual sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that the record is updated, the accession number will be preserved.

VECTOR: pBACe3.6
IMPORTANT: This sequence is not the entire insert of clone
RP11-330C15 It may be shorter because we sequence overlapping
sections only once, except for a 100 base overlap.
The true right end of clone RP11-330C15 is at 157264 in this
sequence. The true left end of clone RP11-465C24 is at 130978 in
this sequence. The true right end of clone RP11-153124 is at 100
this sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           organism="Homo sapiens"

* NOTE: This record contains 79 individual
sequencing reads that have not been assembled into
contigs. Runs of N are used to separate the reads
and the order in which they appear is completely
arbitrary. Low-pass sequence sampling is useful for
identifying clones that may be gene-rich and allows
overlap relationships among clones to be deduced.
However, it should not be assumed that this clone
will be sequenced to completion. In the event that
the record is updated, the accession number will
be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              http://ftp.genome.washington.edu/RM/RepeatMasker.html

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Elhaj, C., Emerling, S., Escotto, M., Falls, T., Ferraguto, D., Flagg, N., Ford, J., Foster, P., Frantz, P., Gabisi, A., Gao, J., Garcia, A., Garner, T., Garza, N., Gill, R., Goreil, J.H., Guevara, W., Garcia, A., Garner, T., Garza, N., Gill, R., Goreil, J.H., Guevara, W., Garcia, A., Garner, T., Garza, N., Gill, R., Goreil, J.H., Guevara, W., Harlandez, O., Harti, M., Havlak, P., Hawes, A., Hernandez, J., Hernandez, O., Hodgson, A., Hogues, M., Holloway, C., Hollins, B., Homsi, F., Hodgson, A., Hogues, M., Holloway, C., Hollins, B., Homsi, F., Jackson, L.E., Howard, S., Huber, J., Johnson, R., Jolivet, S., Joudah, S., Karlsson, E., Kelly, S., Khan, U., King, L., Korvah, J., Kovar, C., Kratcovic, J., Kureshi, A., Landry, N., Leel, B., Lee, E., Lewis, L.C., Liu, J., Liu, W., Leel, R., Lee, E., Lewis, L.C., Liu, J., Liu, W., Lall, R., Lee, E., Lewis, L.C., Liu, J., Liu, W., Losler, A., Lucler, A., Lucler, R., Luna, R., Loulseged, H., Lozado, R.J., Lu, X., Lucler, A., Lucler, R., Luna, R., Martindale, A., Marrinez, E., Massey, E., Mawhiney, E., McLeod, M.P., Martindale, A., Marrinez, E., Massey, E., Mawhiney, E., McLeod, M.P., Martindale, A., Marrinez, E., Metzker, M., Miller, A., Miner, G., Miner, G., Merscher, S., Mctzker, M., Miller, A., Miner, G., Miner, G., Merscher, S., Wetzker, M., Miller, A., Miner, G., Miner, G., Mersch, A., Nguyen, N., Nguyen, N., Netschen, J., Newteon, N., Nguyen, A., Nguyen, N., Netschen, J., Newteon, N., Nguyen, A., Nguyen, N., Netschen, J., Newteon, N., Oyiedo, R., Pacc, A., Paycon, B., Petry, J., Peters, L., Peters, L., Pickens, R., Primus, E., Pull, L., Quilles, M., Ren, Y., Rives, M., Rojas, A., Rojubokan, I., Solfe, M., Shoshtari, N., Sisson, I., Sodergren, E., Sonaike, T., Sparks, A., Shoshtari, N., Sisson, I., Sodergren, E., Sonaike, T., Sparks, A., Shoshtari, N., Sisson, I., Sodergren, E., Sonaike, T., Sparks, A., Shosha, M., Sharks, A., Shosha, M., Tang, H., Tansey, J., Taylor, C., Taylor, T., Telfrod, B., Thomas, N., Wang, O., Wang, S., Warren, R., Wallalon, D., Wang, S., Wa
                                                                                                                                    * NOTE: Estimated insert size may differ from sequence length
(see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)
* NOTE: The contigs are based on the application
* of the PGI method using the Human genome (NCBI build 31)
* as the comparative genome.
* NOTE: This is a 'working draft' sequence. It currently
* consists of 1 contigs. Gaps between the contigs
* are represented as runs of N. The order of the pieces
* is believed to be correct as given, however the sizes
* of the gaps between them are based on estimates that have
* provided by the submittor.
* This sequence will be replaced
* by the finished sequence as soon as it is available and
* the accession number will be preserved.
* I 129264: contig of 129264 bp in length.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      7
Direct Submission
Submitted (06-FEB-2002) Production Sequencing Facility, DOE Join Genome Institute, 2800 Mitchell Drive, Walnut Creek, CA 94598, U Genome Institute, 2800 Mitchell Drive, Walnut Creek, CA 94598, U on Feb 6, 2002 this sequence version replaced gi:15055295. Sequence Quality Assessment:
This entry has been annotated with sequence quality estimates computed by the Phrap assembly program.
All manually edited bases have been reduced to quality zero. Quality levels above 40 are expected to have less than 1 error in 10,000 bp.
Base-by-base quality values are not generally visible from the GenBank flat file format but are available as part of this entry's ASN.1 file.
                                                                                                                                                                                                           2 (bases 1 to 169211)

Direct Submission

L Submitted (16-MAY-2001) Clemson University Genomics Institute, Clemson University, 100 Jordan Hall, Clemson, SC 29634, USA, On Jul 19, 2001 this sequence version replaced gi:14530839.

* NOTE: This is a 'working draft' sequence. It currently consists of 1 contigs Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

* This sequence will be replaced the contigs of 12996 by in length.

* The accession number will be preserved.

1 129996: contig of 12996 by in length.

This entry has been annotated with sequence quality estimates computed by the Phrap assembly program.
All manually edited bases have been reduced to quality Quality levels above 40 are expected to have less than 1 error in 10,000 bp.
Base-by-base quality values are not generally visible GenBank flat file format but are available as part of this entry's ASN.1 file.
                                                                                                                                                                                                                                                                                                                                        Rice Genomic Sequence Unpublished

GENSCANI. 0. BLASTEZ. 0. as well as plicepredictor.
He dentified cloth sequences using BLASTEZ. 0. with the
Corresponding DEBJ accession no. and RGP clone ID.
A gene with dentify to registicant bonology (covering almost the bentify predictor.)

A gene with dentify to registicant bonology to with the proper of ```

```

NOTE: It currently consists of 1 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submitter. This sequence will be replaced by the finished sequence as soon as it is

Direct Submission

Direct Submission

Submitted (13-MAY-2003) Human Geneme Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On May 13, 2003 this sequence version replaced gi:23268904. The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.ngsc.bom.tmc.edu/projects/rat/). Bach contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each corintig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.
 Milosavljevic, A., Miner, G., Minja, E., Montemayor, J., Moore, S., Morgan, M., Morris, K., Morris, S., Munidasa, M., Murphy, M., Naikervis, C., Neal, D., Newton, N., Nguyen, N., Norris, S., Nankervis, C., Neal, D., Newton, N., Nguyen, N., Norris, S., Nankervis, C., Neal, D., Newton, M., Olarnpunsagoon, A., Pal, S., Parke, K., Pasternak, S., Paul, H., Perez, A., Perez, L., Pfannkoch, C., Plopper, F., Poindexter, A., Popovic, D., Primus, E., Pu, L.-L., Ploper, F., Peindexter, A., Popovic, D., Primus, E., Pu, L.-L., Ploper, F., Peindexter, A., Popovic, D., Primus, E., Pu, L.-L., Ploper, F., Paster, R., Reeves, K., Regier, M.  Rat Genome Sequencing Consortium.
 Unpublished
 NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank draff_data.html).

NOTE: This is a 'working draft' sequence. It currently consists of 1 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

This sequence will be replaced

JOURNAL
 TITLE
 Norman, C.H., O'Connor, T., O'Donnell, P., O'Neil, D., Olivar, T.M., Peterson, K., Pierre, N., Pisani, C., Pollara, V., Raymond, C., Riley, R., Rogov, P., Rothman, D., Roy, A., Sancos, R., Schauer, S., Stevery, P., Spencer, B., Stange-Thomann, N., Stojanovic, N., Subramanian, A., Talamas, J., Tesfaye, S., Theodore, J., Tirrell, A., Travers, M., Triglio, J., Vassiliev, H., Viel, R., Vo, A., Wilson, B., Wilson, B., Wilson, B., Wilson, B., Wilson, B., Wilson, M., Wyman, D., Ye, W.J., Young, G., Zainoun, J., Zimmer, A. and You, M.
 NOTE: This record contains 242 individual sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that the record is updated, the accession number will be preserved.
